

What are solar leads?

Solar leads are potential customers who have expressed interest in learning more about solar power for their home or business. Solar companies generate leads through marketing and advertising campaigns, and they can also purchase lists of leads from third-party providers. The most qualified leads are those that come from referrals or word-of-mouth.

How are the solar leads verified?

Leads are phone verified and because of a strong website presence online, you can be sure the leads generated are from customers actively seeking solar installation.

How can solar energy companies generate leads?

One of the most effective ways to generate leads is through online advertising. By targeting keywords related to solar energy, companies can reach consumers who are actively searching for information about solar panel installation.

What is the cost of solar leads?

The cost of solar leads typically ranges between \$25 and \$300. This can vary based on factors such as your location and the number of solar companies the leads are shared with. Most installers looking to grow their sales teams aim to buy high-quality solar leads at a reasonable cost.

Is it beneficial to buy solar leads?

Buying solar leads has its pros and cons, just like generating your own leads. One of the main advantages is that you can quickly gain instant business and customers, especially if you're starting a new solar business. This can help you grow your business much faster than building it slowly over time.

What are some good websites to buy solar leads?

Two notable platforms to buy solar leads are SolarLeadFactory and Modernize.com. SolarLeadFactory offers leads at a good cost with an excellent contact rate of over 70%, and a conversion rate of 30 to 35% leads to appointments and 6 to 15% leads to sales. Modernize.com is another amazing platform for buying solar leads.

The efficiency (η_{PV}) of a solar PV system, indicating the ratio of converted solar energy into electrical energy, can be calculated using equation [10]: $\eta_{PV} = P_{max} / P_{inc} \dots$
