

How to charge a 12V battery with a solar panel?

Here we talk about a simple solar charger circuit. It takes power from a 20V, 1A solar panel and then charges a 12V battery. We are using a 7812 voltage regulator IC, three 1N4007 diodes, and a 2.2kΩ resistor to make sure the charging happens safely. Now let's go step by step. First our solar panel gives us 20V DC at 1A when the sun is bright.

Can a 12V battery take 20V DC?

First our solar panel gives us 20V DC at 1A when the sun is bright. But a 12V battery cannot take direct 20V, so we need to regulate this voltage, otherwise the battery can get damaged. Now we put a 7812 voltage regulator IC in between. This IC normally gives 12V output.

Can a 12V battery be charged with a 7812 voltage regulator IC?

Now we put a 7812 voltage regulator IC in between. This IC normally gives 12V output. But wait, 12V is not enough for charging a 12V lead-acid battery, because a 12V battery actually needs around 14V to charge fully.

How do you charge a solar panel?

Use thick wires (at least 18 AWG) from the solar panel to the circuit because thin wires will drop voltage and cause low charging. Battery wires should be even thicker (14 AWG or 12 AWG) because charging current can be high. Solder all joints properly. Bad solder joints = bad charging.
