

How much do solar panels cost in Colorado?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Colorado homeowner needs a 9.6 kW solar panel system to cover their electricity needs, which comes out to \$28,102 before incentives. Prices range from \$23,887 to \$32,317 before incentives.

How much does a 5 kW solar system cost in Colorado?

The average cost for a 5 kW solar panel system is around \$14,500 in Colorado. Once you factor in the 30% credit, the cost comes down to \$10,150. When you file your federal income taxes, you can claim this incentive as a credit towards your federal tax bill.

Are solar panels a good investment in Colorado?

The average Colorado solar shopper will save \$4,350 on solar panels with rebates and incentives. Solar panels are a great investment for Colorado residents, thanks to a rock-solid net metering policy and lots of local and utility level incentives--not to mention the big federal clean energy tax credit.

Are there solar incentives in Colorado?

There's no shortage of solar incentives in Colorado. Residents can also benefit from rebates, grants and low-cost loan programs. Holy Cross Energy customers are eligible to get a cash rebate after installing a solar panel system.

What are the benefits of Colorado's community solar program?

The resulting community solar program will reduce the barriers for income-qualified households to receive the benefits of solar energy and participate in the state's energy transition with the highest guaranteed bill credit discounts in the country.

Will Colorado regain its leadership position on community solar?

Today's action by Gov. Polis will position the state to regain its leadership position in providing equitable clean energy options for customers. We are grateful for Gov. Polis' leadership on this vital issue and applaud the bipartisan support this legislation received.
