

What does the 3G light on my microcell mean?

The green 3G light on your AT&T MicroCell indicates that it is acting as a network provider for your device instead of "AT&T" (as shown below). You may need to restart your cell phone for "AT&T MicroCell" or "AT&T M-Cell" to appear. Note: Some mobile devices will display items differently. Cell phones may take some time to switch to the MicroCell.

Why isn't my AT&T 3G MicroCell working?

If restarting your 3G cell phone does not resolve the issue, then restart your MicroCell by unplugging the power adapter from the wall outlet, waiting 10 seconds, and plugging it back in. It may take an additional 30 minutes for the 3G light to turn solid green. You cannot activate your MicroCell using the 'I have a network' connection on page 9.

Will a 3G AT&T cell phone work with a microcell?

All 3G AT&T cell phones that receive wireless service from AT&T will work with the MicroCell if they are added online to the MicroCell's approved user list. You don't have to change anything on your phone.

How do I connect a 3G modem to a microcell?

To connect a 3G modem to a microcell, follow these steps: Connect the existing Ethernet cable to the "Computer" port on your MicroCell (the other end should still be connected to your router). Connect the yellow Ethernet cable to the "Ethernet" port on your MicroCell and the Ethernet port on your modem. Wait up to 90 minutes for your 3G light to turn solid green before proceeding.

How do I activate my AT&T 3G MicroCell?

Connect your MicroCell to a power outlet with the AC Power Adapter. The Power light on the front of the device will come on immediately. Activate your device online by visiting att.com/3GMicroCell-Activate and following the instructions on the screen. Within a few minutes, other lights will flash as a GPS signal is located and software is updated.
