

What is a solar power purchase agreement (SPPA)?

A solar power purchase agreement (SPPA) is a financial arrangement in which a third-party developer owns, operates, and maintains the photovoltaic (PV) system, and a host customer agrees to site the system on its property and purchases the system's electric output from the solar services provider for a predetermined period.

What is a solar PPA?

Solar PPAs are agreements where a solar power provider installs and maintains solar panels on a host customer's property, generating electricity that is then sold to the customer. On-site PPAs involve solar panels installed directly on the customer's premises, while off-site PPAs utilize solar farms located elsewhere.

What are the upfront costs of a solar PPA?

Solar power purchase agreements (PPAs) allow you to install a home solar system on your roof with no upfront costs. Instead, you pay the solar company every month for every kilowatt-hour of solar energy the panels produce.

What happens at the end of a solar PPA contract?

At the end of your PPA contract, you can choose to renew the agreement, have the system removed, or purchase the solar panels at fair market value. If you need more electricity than the solar panels produce, you will pull electricity from the grid.

Can a homeowner enter a PPA with a solar installer?

Yes, a homeowner, also referred to as the host customer, can enter a Power Purchase Agreement (PPA) with a solar installer. The terms of the agreement can range from five to 25 years. The solar developer will install the panels on the host customer's roof, which will cover the home's electricity usage.

Should I buy solar panels at the end of my PPA contract?

At the end of your PPA contract, you can choose to renew the agreement, have the system removed, or purchase the solar panels at fair market value. However, purchasing the system at the end of the contract would actually cost you more in the long run than if you had purchased a system to begin with.
