

What is a solar fan with a solar panel?

A solar fan with a solar panel is a fan that works directly on the solar panel. It converts the sun's power into electricity (30W Solar Panel included) and does not require a battery. (B) DC Table Fan is included in the price. The Belifal Brand Solar Fan operates without batteries, using free electricity from the sun.

What is the size of a solar fan?

The solar fan is 14-inches in size and includes 25-feet of wire for positioning the solar panel wherever it will receive the most direct sunlight. The fan blade is high-efficiency and produces a high volume of air movement. There are four mounting brackets for easy, quick placement.

Why should you choose a solar powered ventilation fan?

Unlike other solar powered fans, we have embraced the square/rectangle shape of solar panel cells. Because of this, we are able to capture 2-4 times the amount of solar power to have a more useable and reliable ventilation fan for whatever structure, room or holding tank you are trying to keep cool and odor free.
