What is a space-based power satellite?

A space-based power satellite,i.e.,solar power satelliteis the power system,which rotates in space and collect the solar energy from sun in space and transmit this energy to ground.

What is electrical energy transmission without wire?

Part of the Algorithms for Intelligent Systems book series (AIS) Electrical energy transmission without wire (Wireless power transmission) is a helpful and advantageous innovation that can be utilized to gather sunlight-based energy and focus on earth surface without the requirement for a wire association which is also called solar power satellite.

What is solar power satellite (SPS)?

Solar Power Satellite (SPS) is an energy system which collects solar energy in space and transmits it to the ground. It has been believed as a promising infrast

What is wireless power transmission?

Wireless power transmission means to deliver the power to an end use device without using contact our wire. This is very old and known Technology. Wires allow devices to receive both power and also communicate with other devices.

What is wireless power transmission (WPT)?

The meaning of Wireless Power Transmission is that transferring the energy without using any wire. It means that no physical connection between transmitter and receiver. In Wireless Power Transmission (WPT) there are using different type of principle for transfer the energy like Inductive,Capacitive and Microwave principle.
