

Adapter for electric to solar fountain pump container pump

How does a solar water fountain pump work?

A solar water fountain pump runs on the same power only supplied by a solar setup. Typically, an AC pump on a water fountain will either plug into an AC socket near the fountain or into a more distant power source. Either way, you will have high voltage pumps, cables, and connections running through the garden and in proximity to water.

How do you change an electrical pump into a solar water fountain?

Changing an electrical pump into a solar water fountain pump is a task most people don't have the time to deal with. Place the new solar water fountain pump into the water fountain. Center it as much as you can and then measure out the rubber tube and test fit the old tubes.

What is a Solar Fountain Pump Kit?

The Solar Fountain Pump Kit is a compact, submersible pump offered exclusively by SC Origin that allows you to create small waterfalls, fountains, or any other indoor or outdoor water feature you can think of. This highly efficient pump produces flow rates of 30-45 gallons per hour and can raise water up to 2 feet within a tube.

Should I convert my old water fountain pump to solar?

As most water electric pumps for a water fountain are generally small, this is usually fairly simple. The primary concern is ensuring the inverter can drive a load equal to or exceeding your pump wattage. When converting your old pump to solar, don't fear going big. An over-capacity solar setup is actually an excellent thing.

How to use solar garden fountain pump?

?Environmentally Friendly to Use? Just put the solar garden fountain pump in the water (under sunlight), and wait 3 seconds to see the gorgeous fountain show. The effect will be better while the sunlight is strength. No external installation, no need batteries. Easy access to get the beautiful things. It is also can be a floating pool fountain.

Can you put a solar system near a water fountain?

Typically, an AC pump on a water fountain will either plug into an AC socket near the fountain or into a more distant power source. Either way, you will have high voltage pumps, cables, and connections running through the garden and in proximity to water. A solar system can be located close to the fountain with a very short high voltage cable run.

The higher the HP of an electric water pump, you'll typically need more solar panels and a larger inverter. An inverter takes power from incoming DC voltage and turns the power into AC ...
