What are the advantages and disadvantages of solar thermal energy?

While solar thermal energy has many advantages, especially environmental ones, it has drawbacks, too. Unlike energy generated from fossil fuels, such as natural gas, petroleum and coal, solar energy is infinitely renewable. This makes the technology more reliable over the long-term, freeing owners from worry about replenishing it.

What are the benefits of solar thermal power plants?

In addition to the generic benefits of solar energy, solar thermal power plants have several other advantages. 1. Renewable Source of Energy Solar thermal power plants are based on solar radiation, which is a perpetual source of energy.

What are the disadvantages of solar thermal power plants?

Listed below are some of the major disadvantages of solar thermal power plants. The major drawback of Concentrated Solar Power Plants is that capital cost and maintenance cost is more expensive than other power stations. It is even more expensive than Solar PV Plants.

What are the advantages of solar thermal power stations?

Solar thermal power stations have a lot of benefits and some of which can be comparable to the advantages of solar energy. In this list, we have included some of its unique advantages from other solar systems. This simply means that solar energy is something that will never be exhausted from the face of the earth.

What are the disadvantages of solar energy?

But the massive numbers of mirrors can negatively impact the natural habitat of desert wildlife, especially the endangered species on the verge of extinction. Expansion of such power plants is one of the major factors promoting rapid deforestation. This is also one of the disadvantages of solar energy in general.

Are solar thermal power plants eco-friendly?

That's why with solar thermal power plants, we can potentially lower carbon emissions and be less dependent on fossils. Since solar thermal stations don't depend on burning coal or natural gas to produce steam, it is eco-friendly. Without burning natural resources, we can potentially reduce greenhouse gases which destroys the ozone layer.
