

How to change wattage on Geek vape aegis solo?

If the device is in wattage mode, you can adjust the power by pressing the plus and minus buttons on the front of the device. To change vaping modes, press the fire button three times quickly to open the menu. The reason why the Geek Vape Aegis Solo is such a popular vape mod is its reliability.

How much power can the Aegis Solo handle?

The Aegis Solo is powered by a single 18650 battery and can handle up to 100W in Power Mode (20W more than the Aegis Mini). It also offers Temperature Control Mode from 200-600°F. It comes with TC support for typical materials (SS, NI200 & Ti) and the option of TCR. Pretty standard but it does have a full set of modes.

What chipset does the Geekvape Aegis Solo use?

The Geekvape Aegis Solo uses Geekvape's new AS-100 chipset. This chipset is said to provide more accurate and efficient performance. The Aegis Solo has Power Mode, Bypass Mode, Temperature Control Mode, TCR and VPC. Powered by a single 18650 battery, the Aegis Solo will fire at up to 100W in Power Mode (20W more than the Aegis Mini).

How many buttons does the Aegis Solo have?

The Aegis Solo has three buttons: one diamond shaped firing button and two connected adjustment buttons. The firing button is comfortable to fire with either your thumb or your index finger depending on how you hold the mod. It's a nice size and has a good clickiness to it.

Why is my Geek vape aegis solo not working?

If nothing happens when you attempt to use the Geek Vape Aegis Solo, it's likely that the battery is dead or that the device is locked. To unlock the device, press the fire button five times quickly. If the device still doesn't work, try charging the battery.
