

Are solar panels right for my home?

We have the answers to all your burning questions to help you decide if solar panels are right for your home. Solar panels can generate cheap and clean energy. Here is everything you need to know. Throughout the country, residential solar panels have become an increasingly popular option for generating energy for homes.

Are residential solar panels a good option?

Throughout the country, residential solar panels have become an increasingly popular option for generating energy for homes. The rising costs of energy across the US, along with falling prices for solar panels, and excellent federal tax incentives, have made solar power a much more attainable and economically beneficial option for homeowners.

How much does it cost to install a solar panel?

(Mar 2025) Solar panels generate "free" electricity, but installing a system still costs money. A typical 8-kilowatt (kW) solar panel system costs \$22,712 before considering any financial incentives. Your energy needs determine the system size you need, which affects the overall price of your solar panel installation.

How much does a solar system cost?

Leasing a system is cheaper upfront, but you won't get the federal tax credit. The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives. However, a typical American household needs a system closer to 10 kW to adequately power their home, which costs \$28,241 in 2024.

Where can I buy solar panels?

If you want to buy panels directly, most hardware stores and larger retailers have them available. If you'd like to get them through a professional, a good place to start, according to Delman, is the website of your local solar industry association (for example, the New York Solar Energy Industries Association).

How much does solar energy cost per watt?

The cost per watt is what you pay for each unit of power of your solar energy system. Think of it a little like "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes. As of publishing, the average cost per watt is \$2.84.
