

How does AGL estimate my annual electricity usage?

We estimate your annual electricity usage based on your manually entered bill amount and various assumptions. Using insights from our large customer base, we select a general AGL customer usage profile to estimate your savings and results. Your actual savings will vary based on your actual usage.

How can AGL help you get the most out of solar?

After you're all set up with solar, AGL can help you get the most out of your solar system through special solar deals and feed-in tariffs (FiT). Feed-in tariffs are a form of rebate whereby customers are compensated a few cents for every unused kilowatt-hour (kWh) of electricity exported to the energy grid.

How do you calculate solar power generation?

To calculate solar power generation, you need to determine solar irradiance using the formula: $\text{Power} = \text{Area} \times \text{Efficiency} \times \text{Radiation}$. For example, a PV panel with an area of 1.6 m², efficiency of 15%, and annual average solar radiation of 1700 kWh/m²/year would generate: 2.56 kWh/day. Knowing the power consumption of your house is crucial for energy demand calculation.

How does the AGL app work?

Eligibility criteria apply. The AGL app lets you monitor how much solar you've exported, what you've saved, plus your battery's charge, cycle and count - all in one interactive chart. Get a quote for a solar battery or bundle. We'll help you choose the right solar system for your home. Enjoy the convenience of a home EV charger

Does AGL still offer solar installation services?

AGL no longer provides installation services to residential customers, but the retailer still wants to attract households that have solar panels. Solar customers in Victoria, South East Queensland, New South Wales and South Australia can sign up to AGL's special deal called 'AGL Solar Savers'.

How do you estimate a solar system?

System estimates: Based on how much energy you use during sunlight hours, and an estimate of how much sun your home gets during the day, we estimate the appropriate size for your solar system (in kilowatts of power) and how much power that system would produce. These are rough estimates, based on assumptions.

Different types of electricity tariffs and how you're charged. Your tariff is made up of one or a combination of tariff types: Single rate - You're charged at the same rate for the electricity you use no matter what time of ...

Weeks after the Australian Energy Regulator revealed price hikes for Ausgrid, Essential, Endeavour, Energex and SAPN customers, retailers AGL and Origin have announced their own price rises.. Customers on variable rate ...

Easily calculate solar energy potential and visualize it with PVGIS24 mapping tool. Access interactive maps, precise solar data, and advanced tools to optimize your solar project

Learn how we calculate bill projection, usage and cost so far in My Account and the AGL app. Your bill projection is an estimated total of what your bill will be at the end of ...
