

What is a solar rechargeable keyboard?

A solar rechargeable keyboard is a type of keyboard that uses integrated solar panels to charge from any bright light source, such as sunlight or indoor light. This eliminates the need to worry about low batteries or tangled wires. An example is the Xcellon Wireless keyboard, which is easy to install with its Plug-and-Play functionality.

How long does a solar keyboard battery last?

One of the first things to notice is a row of solar panels on the top, which trickle charge the keyboard. The keyboard uses 65uA in idle and 30uA when in a deep sleep. With the solar panels providing anywhere between 600-1200uAh a day, the battery should last a year and a half under even harsh conditions.

How much does the GCell Solar keyboard weigh?

The GCell Solar keyboard is compact and lightweight, weighing only 1.08 pounds. Bluetooth-friendly, keyboards like GCell Solar are an awesome match for iPad Air. Solar powered, charge anywhere as long as there's light, sun or otherwise. Comfortable typing - the keys are placed at least 2mm from each other.

Are solar-powered keyboards a viable alternative to battery-powered PC accessories?

Using advanced photovoltaic technology and fast-charging supercapacitors, the keyboard actually harnesses ambient light to store energy, eliminating the need for disposable batteries. We've seen plenty of solar-powered devices over the years, but only recently have we seen viable alternatives to battery-powered PC accessories.

Can a Blass keyboard draw power from solar power?

While the leak doesn't give away any technical details, Blass suggests that the keyboard can draw power from solar and ambient light. As we can see from the leaked images, the keyboard will feature a sleek design with low-profile keycaps and will be offered in two colors -- white and black with green accents.

Does Macally offer solar rechargeable keyboards?

Yes, Macally offers solar rechargeable keyboard versions compatible with various computer units. These keyboards are cordless and solar-powered, eliminating the need for battery changes. They can be charged via any light source and the built-in Lithium ion battery lasts up to 150 hours in total darkness.
