Allworx power button is solid orange

How does an Allworx system work?

When a call is made within an Allworx system,the hub responds with a 300 Redirectto the recipient's extension,which is on the same server. For example,if the recipient is extension 111,the hub provides a Contact header URI of <sip:111@66.64.219.38:5060>. The Allworx server then initiates a call to extension 111,and the call is established once the recipient answers the phone.

What is an Allworx phone set?

The Allworx phone set is the single part of your communication system that impacts your employees every day. It must be flexible,easy-to-use,and productive. With Allworx phones and an Allworx system in each of your office locations,you can incur no long distance charges between sites and merge multiple sites with one system.

Do I need to unplug the allworx server?

o Before working inside the Allworx server,unplug the unit to help prevent electrical shock or system damage. o To help prevent electrical shock,the permanent ground connecting screw located next to the power receptacle on the rear panel must be permanently connected to earth using 18 AWG wire or larger.

Where can I contact allworx?

How do I protect my allworx system from fire?

o To reduce the risk of fire, use only 26 AWG or larger UL listed or CSA certified telecommunications line cord. o To help protect the Allworx system from sudden, transient increases and decreases in voltage, use a surge suppressor, line conditioner, or uninterruptible power supply (UPS).

How do I protect my allworx server?

o Make sure the cables are not located where they can be stepped on or tripped over. o Do not spill food or liquids on the Allworx server. o Do not push any objects into the openings of the server. Doing so can damage the unit or cause electrical shock. o Keep the Allworx server away from heat sources such as radiators.
