

What are Amazon's new solar projects?

The new projects include a 300-megawatt (MW) solar project paired with 150 MW of battery storage in Arizona and a 150 MW solar project paired with 75 MW of battery storage in California. Combined, the two projects double Amazon's total announced solar paired with energy storage from 220 MW to 445 MW.

Why does Amazon use solar energy?

The energy storage systems allow Amazon to store clean energy produced by its solar projects and deploy it when solar energy is not available, such as in the evening hours, or during periods of high demand. This strengthens the climate impact of Amazon's clean energy portfolio by enabling carbon-free electricity throughout more parts of the day.

How many solar and wind projects does Amazon own?

With more than 500 solar and wind projects globally, Amazon's portfolio is now big enough to power 7.2 million U.S. homes each year. Amazon invested in more than 100 new solar and wind energy projects in 2023, becoming the world's largest corporate purchaser of renewable energy for the fourth year in a row.

How many solar projects does Amazon have?

They vary in project type and size, with three new wind farms, 26 new solar farms, and eight new rooftop solar installations at company buildings around the world. As a result of these projects, Amazon now has a total of 310 renewable energy projects, including 134 wind and solar farms and 176 rooftop solar projects.

Does Amazon have a solar farm?

Among recent wind and solar projects in Europe, Amazon invested in its first solar farm in Greece, following its first in Poland the year before. Rapidly scaling clean energy in the APAC region, Amazon added more than a dozen new projects.

Does Amazon have a rooftop solar project?

The company added its first rooftop solar project in the United Arab Emirates, which is a 2.7 MW installation in Dubai. Amazon also announced seven rooftop solar projects in Australia, Canada, India, and Japan totaling over 5 MW of clean energy capacity.
