

Does APsystems make microinverters?

APSystems make microinverters with a twist. Rather than power one panel at a time, they power 2 to 4 panels per microinverter, depending on the model. They also make a microinverter that accepts 3 phase. These are both innovations which I just don't see the need for.

What is the difference between APsystems and Enphase microinverters?

On the brand level, also see our quick comparison APsystems vs Enphase microinverters. Note that the APsystems product is a dual microinverter with two PV modules per device; the Enphase products are single microinverters with one PV module per device:

Are APS micro inverters reliable?

APS micro inverters were quite popular a few years ago. We mention them in our Enphase micro inverter article: APsystems are another micro inverter manufacturer although in the past industry specialists and solar installers have reported much higher failure and several reliability issues.

Which microinverter is best for my solar system?

The Enphase IQ7 microinverter offers a minimally higher efficiency and a slightly reduced form factor. The Enphase IQ7+ microinverter allows the highest input power, a higher maximum input DC voltage, and a slightly reduced form factor. Wondering what are solar micro inverters, how microinverters work and if they are right for your solar system?

Do APsystems microinverters have a warranty?

APsystems microinverters are accompanied by a standard product warranty of 10 years (which can be extended for a fee), which begins on the earlier of three months after the date of the shipment of the product from the company or the date it is registered in the EMA portal.

What is the difference between APsystems yc600 and Enphase microinverters?

Note that the APsystems product is a dual microinverter with two PV modules per device; the Enphase products are single microinverters with one PV module per device: The APsystems YC600 microinverter offers a wider MPPT voltage range, higher input power than the IQ7, a lower startup voltage, and a higher output power than two IQ7 or even two IQ7+.

Shifting environmental factors constantly challenge the efficiency of solar arrays; dust, debris and shade can drastically lower power output. With a conventional "string" inverter system, the least-performing module determines ...
