

Why did APS add more solar power?

More solar power added: As an addition to APS's existing solar portfolio and strong customer rooftop solar,APS contracted for nearly 2,480MW of solar resources through power purchase agreements that will continue to provide customers with clean and reliable electricity. Battery Energy Storage

Will APS Solar plant deliver solar power after sunset?

Energy storage slated for APS solar plant: At the Agave Solar Plant, located in Maricopa County, more than 400,000 solar panels began serving customers with energy from the sun in 2023. Construction is underway to pair 150 MW of new battery energy storage with this facility to deliver solar power after sunset to customers.

How much energy will APS add?

In all,APS will add nearly 7,300 megawatts(MW) of renewable power,battery energy storage and natural gas to meet the state's growing demand for energy. Picture this,that's enough electricity to run nearly 1.4 million air conditioners at the same time.

What does APS stand for?

Arizona Public Service(APS) has signed agreements to add new energy supplies to its energy mix - APS's largest-ever planned addition of new power sources. In all,APS will add nearly 7,300 megawatts (MW) of renewable power,battery energy storage and natural gas to meet the state's growing demand for energy.

Why is APS expanding a power purchase agreement?

APS is also expanding an existing power purchase agreement by 30 MW to continue to provide customers with reliable,low-cost service. These natural gas additions are critical partners to the large quantities of solar and battery energy storage that will be added to APS's energy portfolio.

When will APS review solar energy buyback rates?

APS's Annual Buyback Rate Review: A Call to Action for Solar Enthusiasts Like clockwork,APS is set for its annual review of solar energy buyback rates,effective September 1,2023. This yearly occurrence,a trend since 2017,signals a prime opportunity for those on the fence about solar energy.
