

How to install APsystems microinverters?

Each APsystems Microinverter has 2 removable serial number labels. Complete installation map by sticking ID label of each microinverter at the right location. 1. The layout of the microinverters' serial numbers installation map is only suitable for typical installation 2. Installation Map is available in the last page appendix of this manual. 3.

What is an APS micro-inverter?

APS Micro-inverters are designed to operate at full power at ambient temperatures of up to 65°C. The inverter housing is designed for outdoor installation and complies with the IP65 environmental enclosure rating. PV systems using APS Micro-inverters are very simple to install.

Do APsystems microinverters need maintenance?

3. The APsystems Microinverter is powered by PV module DC power. AFTER disconnecting the DC power,when reconnecting the PV modules to the Microinverter,be sure to watch for the quick red light followed by ten short green LED flashes. APsystems microinverters do not require any specific regular maintenance.

What temperature can APsystems microinverters operate at?

APsystems Microinverters are designed to operate at full power at ambient outdoor temperatures of up to 65 deg C(or 149 F). The inverter case is designed for outdoor installation and complies with the Type 6 environmental enclosure rating.

Can I Disconnect the PV module from the APsystems microinverter?

Do NOT disconnect the PV module from the APsystems Microinverter without first disconnecting the AC power. Be aware that the body of the APsystems Microinverter is the heat sink and can reach a temperature of 80°C. To reduce risk of burns,do not touch the body of the Microinverter. Do NOT attempt to repair the APsystems Microinverter.

How do APsystems microinverters report to EMA?

After installing and setting the ECU (see ECU Instruction Manual),the full network of APsystems Microinverters automatically reports to the APsystems Energy Monitor and Analysis (EMA) web server. APsystems 3rd generation of dual microinverters are reaching unprecedented power outputs of 730VA or 880VA to adapt to today's larger power module.

The APsystems (APS) Micro inverter shifts DC to AC conversion from a single, centralized string inverter to a compact unit attached directly to each solar module in the power system. ...
