

Is Arcadia a solar power company?

Arcadia (formerly Arcadia Power) is not a power company or energy supplier, as it doesn't generate or sell electricity. Instead, Arcadia connects you to local solar farms and applies credits from those farms to lower your utility bill. Arcadia assigns you a share of a nearby solar farm's output when you sign up.

Does Arcadia Power pay for solar panels?

Arcadia Power does not pay for solar panels. Instead, it offers community solar subscriptions. Participating utilities buy solar energy from Arcadia, which sells subscriptions to consumers and buys energy from solar farms. In some states, consumers pay Arcadia, which then pays the utility and the farm on their behalf.

Who is Arcadia Power?

Arcadia Power is one of the largest community solar companies in the US. They aim to help Americans who can't install solar panels directly on their homes to benefit from renewable energy through community solar projects.

Does Arcadia offer community solar?

Arcadia's primary offering for consumers is participation in its community solar program. This is a simple way for anyone with a utility bill to save money and support renewable energy and a more resilient grid. So, what is community solar?

How does Arcadia pay a solar farm?

For example, if the solar credits applied to your bill are worth \$100, Arcadia might pay the solar farm \$85 and charge you \$90, keeping the \$5 difference as revenue. This spread is made possible by government incentives, economies of scale from managing multiple solar projects, and arrangements with utility providers.

How do I sign up for Arcadia solar?

To sign up for Arcadia's community solar program, first check if your local utility participates by visiting their website. If it does, you can either enter your utility account number or online credentials to sign up with Arcadia.

Your solar discount has larger implications. For every megawatt of distributed solar power, a different megawatt that comes from coal, natural gas, burned waste, or other carbon-emitting sources is not needed—at least in ...
