

How much solar power does Arkansas generate?

Last year solar energy accounted for six percent of the electric power generated in Arkansas, according to the U.S. Energy Information Administration. That is 60 times more solar power than was generated in the state in 2015. Nationwide, the amount of electricity generated from renewable resources has quadrupled since 2011.

Will Arkansas cut solar payments in 2025?

Arkansas' House of Representatives approved legislation Thursday that will reduce compensation for solar users beginning in 2025. This was over opposition led by commercial and industrial electric customers in the state. Senate Bill 295 was approved Tuesday by the Senate and now goes to the governor to sign to become law.

Why is solar power so popular in Arkansas?

LITTLE ROCK -Solar power is growing in popularity in Arkansas, in large part because of passage of Act 464 of 2019. Last year solar energy accounted for six percent of the electric power generated in Arkansas, according to the U.S. Energy Information Administration. That is 60 times more solar power than was generated in the state in 2015.

Does Arkansas allow third party financing of solar projects?

When the legislature passed Act 464 in 2019, Arkansas joined 26 other states that allowed third party financing of solar projects. Act 464 made another significant change in regulations governing the production of electric power.

What does SB 295 mean for solar power in Arkansas?

SB 295 aims to address cost-shifting and ensure fairness to all ratepayers in Arkansas regarding solar power. Solar users are credited for excess power they generate and return to the electric grid for use by all customers. The legislation, sponsored by Rep. Lanny Fite and Sen. Jonathan Dismang, was passed in the House.

Are there incentives to convert to solar power in Arkansas?

Arkansas, a sunny state once known as The Land of Opportunity, has relatively limited incentives for converting to solar power. However, it does have a net-metering program in place, which allows solar panel owners to earn energy bill credits for any excess power produced.

HB1370 echoes the line of attack Entergy and the co-ops have directed at net-metering for years: that the policy shifts costs onto utility customers without solar panels.
