

Why is demand for solar photovoltaics only heading up in 2025?

Demand for renewables like solar photovoltaics is only headed up, according to virtually every industry outlook for 2025 and beyond. This seems to stem from a variety of reasons, including the need to increase the capacity of the nation's electrical power grid. Here are a few examples from government, industry, and third-party reporting sources:

What will happen to the 30% federal solar tax credit in 2025?

With President Trump returning to the White House and the GOP controlling both the House and the Senate a lot of people are wondering what might happen to the 30% federal solar tax credit in 2025. As of March 2025, this tax credit is still law and taxpayers can claim this credit for their investments in solar and/or battery storage projects.

What will the solar industry expect in 2025?

The biggest takeaway - the solar industry is on edge about what's coming in 2025. More than half (56%) of companies flagged the possibility of new tariffs as a major concern, while 50% are worried about changes to solar incentives.

What are the biggest challenges facing solar installers in 2024?

Installers named Qcells, REC, and Silfab as their go-to solar module brands, while Enphase, Tesla, and SolarEdge dominated the energy storage space. However, one of the biggest challenges in 2024 was the wave of solar company closures. A staggering 81% of installers reported that at least one large competitor in their service area shut down.

Will solar power grow in 2023?

The National Renewable Energy Laboratory reports growth in solar from 2023 to 2024. Take a closer look [here](#). The Wood McKenzie report *Gridlock: the demand dilemma facing the US power industry* points out the big change underway because of data centers creating massive increases in demand from the power grid.

Are solar companies ready for 2025?

A third (34%) of respondents said their outlook for 2025 became more negative due to election results, while nearly half (48%) reported no change. Only 18% said they felt more optimistic about their business prospects after the elections. Despite these worries, most solar companies remain resilient.

Innovations like floating solar power plants, offshore wind projects, and green hydrogen production represent exciting new frontiers in renewable energy. Funding for pilot projects and R&D initiatives will spur breakthroughs ...

A 43-year-old Jordanian national living in Orlando, Florida has been arrested and charged with four counts of threatening to use explosives and one count of destruction of an ...

Solar Energy Information. Read the latest news and techniques for efficient solar photovoltaic power, new solar energy systems and more. ... Friday, February 7, 2025. Solar ...

After years of exponential growth in global solar buildout could policy uncertainty, protectionist measures and interconnection and transmission bottlenecks halt that trend in ...

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. Solar. In 2024, generators added a ...

Agency actions from the outgoing administration such as the BLM Western Solar Plan may be under scrutiny with new leadership and majorities in Washington. The expansion ...

A more powerful vendor network and more consumer knowledge are important for guaranteeing high-quality installations. Rooftop solar systems can be more affordable with financial assistance through subsidies, low ...

Last year was a record-shattering year for solar energy industry growth, with 32.4 gigawatts of new electricity-generating capacity in 2023. According to the Solar Energy Industries Association, solar power accounted ...

Gautam Adani U.S. indictment: What do we know so far? The U.S. court claimed that Adani and his co-defendants planned to pay over \$250 million as bribes to Indian officials to secure contract.

With President Trump returning to the White House and the GOP controlling both the House and the Senate a lot of people are wondering what might happen to the 30% ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power ...

More than half (56%) of companies flagged the possibility of new tariffs as a major concern, while 50% are worried about changes to solar incentives. Legislative and political ...

We expect U.S. utilities and independent power producers will add 26 gigawatts (GW) of solar capacity to the U.S. electric power sector in 2025 and 22 GW in 2026.

Companies in solar, wind, and hydrogen are facing subsidy walk backs and tariffs at a time when clean energy providers are essential to the supply equation.

Energy Budget 2025: Nuclear Energy Mission to set up 100 GW capacity by 2047. Finance Minister Nirmala Sitharaman in her Budget speech announced the Nuclear Energy Mission to drive India's transition towards ...

Spanish police have arrested a man in the island of Tenerife on suspicion of carrying out a series of acts of sabotage against critical infrastructure, including wind farms ...

The bottom line is that tariffs are inflationary. While solar panel prices may rise from the latest round of tariffs, the larger impact will likely be seen in your electricity bill. Related: Trump and the Fate of the 30% Solar Tax ...

Adani Bribery Row: Authorities said Adani and seven other defendants, including his nephew Sagar Adani, agreed to pay about \$265 million in bribes to Indian government officials to obtain contracts expected to yield \$2 ...

So far in January, EIA has issued three brief studies tapping solar energy to be the major player responsible for national electricity generation gains in 2025.

California officials want to reduce the financial credits that households with rooftop solar panels can earn for excess energy. "It's the utilities preserving their monopoly," says one homeowner ...
