

What is Audia & how does it work?

Audia is a networkable, decentralized audio system, which is easy to configure & program. Audia allows the installer to quickly & accurately define the exact sound system required for each job. Audia is software programmable, easily expandable, and remotely controllable.

Does Audia have a fixed 12-channel output?

Page 50 Fixed 12-Channel Output &#174; If standard Audia or AudiaSOLO hardware is being used, then microphone level outputs are available on 4x12 configurations. However, to make use of this feature, a Fixed 12-Channel Output block must be placed in the layout.

What system commands are supported by Audia and Nexia devices?

This article describes system commands supported by Audia and Nexia devices. A comprehensive look at the RS-232 and Telnet protocol commands is found in both the Audia and Nexia programs under Help &gt; Help Topics. Under the Contents tab, explore System Control &gt; RS-232 and Telnet Protocol.

Can Audia units be linked together via RS-232?

Audia units cannot be linked together via RS-232, like some other BIAMP products can. (The RS-232 baud rate can be set to 9600, 19200, 38400, 57600, or 115200 - default is 38400) A straight through PC Serial Cable is used to communicate from an RS-232 port on a third-party controller (or PC\*) to the RS-232 port located on the back of an Audia unit.

What type of hardware does Audia use?

Hardware Hardware Overview &#174; Audia hardware is represented by three different chassis models: standard Audia; AudiaSOLO; and AudiaFLEX. Page 111 Ethernet: All Audia units use Ethernet, both for system programming & control. Programming is accomplished using the Audia software provided with each unit.

How many controls can be connected to each Audia device?

Up to 32 controls may be connected to each Audia device, on a daisy-chain 'network', with a maximum cable length of 1000 feet (300 meters).

Power up Audia devices . ... File&gt;Network&gt;Perform Audia Device Maintenance&gt;Select desired Audia device&gt;Set IP address . IP address should be 192.168.1.x (x=1-254) Subnet mask should be 255.255.255.0 Default gateway should be 0.0.0.0 ... Send Configuration File&gt;Network&gt;Send System Configuration . Sends layout configuration to selected Audia unit(s).

Most cRIOs have 2 power inputs. You can detect from the code which is active (in most cases). I have had a similar issue in the past where I wired some circuittrickery around the 2nd input, big caps mostly. If the RIO

lost its primary power I could detect it, and would have enough juice on power2 to abort code and close off file references.

Optionally, to display what's being typed, go to File->Properties and select the Settings tab. Click on &quot;ASCII Setup&quot; and check the checkboxes for &quot;Send line ends with line feeds&quot; and &quot;Echo typed characters locally&quot;, and click ...
