

Are solar panels a good option for a garden office?

Grace Gausden, This is Money, replies: Powering your garden office with solar panels is definitely more environmentally friendly than using standard electricity. However, it is an expensive investment, and should only be considered if you are sure you can afford them - and you'll need to assess if the outlay risks proving a false economy.

What is a solar powered garden office?

Dorset-based Wessex Eco Energy have developed an intriguing garden office which is entirely solar powered and has solar panels and storage batteries fitted as standard. They call it the Huuband there are various models, the one above (Type 22) measuring 3.8m x 3.5m, with one slightly smaller and one slightly large one.

Can solar panels be installed on a shed?

Energy supplier Ovo Energy suggests getting a qualified installer to check before making a decision on solar panels. The supplier says that the best homes - or sheds if they can take them - to install solar panels on are those with south-facing roofs with a pitch of 30 to 40 degrees.

Can you put solar panels on a north-facing roof?

It doesn't recommend putting solar panels on a north-facing roof, but says an east or west-facing roof still works well - though homeowners will probably generate around 25 per cent less energy.

Do I need planning permission to install solar panels?

One of your questions was regarding planning permission, and fortunately most homes don't need it to install solar panels. However, if the building has a flat roof, or if you live in a conservation area, you will need to check with the local council before going ahead.

How do solar panels work?

You can choose from a number of electricity suppliers to pay the tariffs. Here is a full list to choose from. With regards to heating the outbuilding, solar panels are able to heat water that is passed through a series of tubes mounted on the roof, which will then feed a single radiator with warmed water.

The power controller is 10Amp 150W (\$34.95 on amazon). For powering the office equipment: I got a "Kill A Watt" to monitor the power use. The laptop varies between 30 and 50 watts, when I charge the phone it takes ~30 ...
