How much money does CATL invest in a new battery plant?

Both companies will invest 4.1 billion EUR into a new plant that will produce lithium iron phosphate (LFP) batteries for vehicles from the Stellantis group. The plant's annual production is up to 50 GWh of battery capacity. CATL currently has three battery projects in the European Union (EU), including the one in Spain.

Is CATL a leader in solid-state battery technology?

Interestingly, CATL is not the only player in the field of solid-state battery technology. Major automotive and battery companies, such as BYD, Toyota, and Samsung, are also aggressively pushing toward developing all-solid-state batteries.

How many battery plants does CATL have?

The plant's annual production is up to 50 GWh of battery capacity. CATL currently has three battery projects in the European Union (EU), including the one in Spain. The other two are battery plants in Germany and another in Hungary, both already in operation, according to CATL.

What is CATL?

CATL, or China Advanced Technology & Research Group Co. Ltd., is a global leader of new energy innovative technologies, committed to providing premier solutions and services for new energy applications worldwide. CATL's Yibin production base was certified as the world's first zero-carbon battery factory. They have rolled out their battery swap solution EVOGO featuring modular battery swapping.

CATL's battery installations in the January-June period stood at 137.7 GWh, up 29.5 percent from 106.3 GWh in the same period last year. The Chinese power battery giant continued to rank first in the world with a 37.8 percent share and remained the only battery supplier in the world with a market share of more than 30 percent.
