

What types of solar panels are available in BC?

Solar panels are becoming increasingly popular in BC, allowing homeowners to take control of their energy needs. Different types of solar panels, such as monocrystalline, polycrystalline, and thin-film panels, each come with unique features, allowing you to choose the best fit for your home's requirements.

Does BC have solar power?

The more North and West you travel within BC, the lesser the potential for energy generation with solar panel power. Solar has the most potential for areas in the South and East parts of the province.

Where can I use solar power in BC?

Southern locations such as Victoria on Vancouver Island and Vancouver on the Lower Mainland are both excellent areas for utilizing solar power within BC. A 12kW solar system in Victoria would produce approximately 12,050 kWh per year. Vancouver would produce approximately 12,084 kWh per year.

Do you need a solar panel installation in BC?

Planning your home for a solar panel installation in BC can save you lots of time, money and grey hairs. Solar panels for businesses follow similar trends as residential solar but with larger numbers (except for \$/W!). The \$/W continues to decrease further for commercial solar systems as the power increases.

How many solar panels are needed in BC?

Annual Energy Use (kWh) = Avg. Energy Per Day (found on your power bill) x 365  
Number of solar panels required in BC = Annual Energy Use (kWh) / 400 (W/Panel) / 1.0 (MWh/kW)  
The above formula assumes that the solar power system will produce 1,000kWh per kW. This value is on the conservative side of average.

Why are solar panels so popular in BC?

Solar panel costs are decreasing, making it more cost-effective for homeowners to install solar panels and take advantage of the federal solar tax credit. Solar panels are becoming increasingly popular in BC, allowing homeowners to take control of their energy needs.
