What kind of light bulb should I buy?

When you cannot go outdoors to learn about solar energy, incandescent light bulbs (the kind with a filament) are the best choice for making solar panels work indoors. Cloudless skies are ideal, but incandescent bulbs are the next best option.

Are solar light bulbs a good choice for outdoor lighting?

These solar light bulbs from LightMe makes an ideal outdoor lighting option, as they are ultra-portable and fully solar-powered, which means no wiring, no external power source, no maintenance, and no power bills. Simply set up the attached solar panel outside in your location of choice and let nature do the rest.

Which lightbulb is most energy efficient?

The most common type of energy-efficient lightbulb is LED, because it is the most efficient and affordable, and they last the longest with about a 10-year lifespan. LED bulbs are our top choice due to their low cost and great output. But, CFLs are a good second choice.

How many watts a light bulb does a solar panel produce?

These highly efficient and cost-effective light bulbs emit only small amounts of light with energy high enough to produce much power from a solar panel. Solar panels produce power based on the amount of light they receive. 60 W equivalent or 75 W equivalent bulbs are easy to find, but they may not produce a significant amount of power for a solar panel.

Are solar lightbulbs a good investment?

But if you have solar panels, energy-efficient bulbs ensure that the power from your solar energy goes further. It's not just lightbulbs that can lead you to an energy-saving, less pollution-producing home. Be even more environmentally friendly by adding solar panels to your house.
