

What are solar energy ETFs?

Solar energy ETFs invest in stocks of companies specializing in solar energy generation and distribution, solar system construction and installation, solar material and component manufacturing. The table includes only relevant data and will allow you to track the values of the best clean energy exchange-traded funds.

Is solar energy UCITS a good ETF?

This ETF is for those excited about the future of solar power. Solar Energy UCITS is a European ETF solely focused on solar energy, focusing on companies and manufacturers who operate in the solar industry. This pure-play ETF is attractive for those who want to solely invest in solar energy and not other kinds of clean energy.

How are solar energy ETF issuers ranked?

ETF issuers who have ETFs with exposure to Solar Energy are ranked on certain investment-related metrics, including estimated revenue, 3-month fund flows, 3-month return, AUM, average ETF expenses and average dividend yields. The metric calculations are based on U.S.-listed Solar Energy ETFs and every Solar Energy ETF has one issuer.

Which solar energy ETF should you buy?

Amongst all the other ETF options for solar power, RAYS is the one best positioned for growth, both from its holdings and strategy. It should be on your list of solar energy ETFs to buy. Their portfolio is primarily focused on emerging markets for solar power, such as the Chinese and Japanese markets.
