

How do I choose a solar energy plan?

If you have solar panels with battery storage: You'll probably want a solar energy plan with a reasonable FiT and competitive energy rates. In this instance, your energy plan should be price-effective for when your storage system runs dry, or runs in excess of what it can handle.

Do you need a solar energy plan?

If you can rely on your solar panels for the whole day: You want a solar energy plan with a good electricity usage and supply rate. This is because you'll still be relying on the grid for electricity in the evenings when your solar panels are inactive.

How do I choose a solar panel?

When deciding which type of panel to use, calculate each one's cost versus what your energy needs and space limitations are. Less efficient panels are cheaper but you'll need more of them to generate a specific amount of energy. Solar panels alone can't produce the form of electricity we use in our everyday lives.

Should I buy a solar energy plan?

If your solar panels help with only some of your daytime power usage: You may want a solar energy plan with low electricity usage rates. This is because you'll still be heavily relying on the grid to meet your energy usage requirements. In this case, a good FiT would be redundant, as you aren't exporting much leftover solar to the grid, if at all.

Is a solar electricity plan a good option?

A solar electricity plan could be a good option for households searching for a higher FiT than typical electricity plans. Check that the usage and supply rates aren't high when compared to other providers with less competitive FiTs, as your night time use will still make up a good portion of your bill.

Which solar panel companies are the best?

When it comes to choosing the best solar panels, Sunlux, Project Solar, and Freedom Solar Power are our top picks. ConsumerAffairs is here to help you evaluate your choices and get the best deal on residential solar panels. We've heard from over 100,000 verified solar customers since 2018.
