

What is the BigBelly Solar Intelligent Waste & recycling collection system?

The BigBelly Solar Intelligent Waste & Recycling Collection System has been designed to harness the power of information technology and renewable energy to solve an expensive and messy problem: how to more efficiently manage the process of collecting solid waste and recycling.

What are the capabilities of BigBelly trash bins?

Mix and match the capabilities that each location needs: waste interface, smart & connected, fullness indication and compaction. You have choices: a lineup of five different Bigbelly trash bin types at price points that start comparable to traditional bins.

How many BigBelly Solar trash cans are there in Philadelphia?

There are thousand BigBelly solar trash cans in Philadelphia. According to Donald Carlton, Deputy Commissioner of Philadelphia's Streets Department, this installation has led to spectacular savings. The trash collection frequency in the Center City downtown area has decreased from seventeen times a week to only three collections per week.

What waste streams do BigBelly bins cater to?

Bins are available in five different waste streams: trash cans, single-stream recycling, paper, bottles & cans, and organics - and are available in a variety of waste disposal interfaces. Bigbelly's CLEAN(TM) Management Console gives visibility and insights to all aspects of the Bigbelly public waste system.

How does a BigBelly garbage can work?

A BigBelly garbage can holds five times more waste than a regular can due to its automatic solar trash compactor. When it reaches its capacity, it transmits a wireless signal to the garbage collectors, telling them it's time for a pick-up.

Does Philadelphia have a BigBelly garbage can?

Philadelphia has implemented Bigbelly waste management solutions to cut costs and carbon pollution. A BigBelly garbage can has an automatic solar-powered trash compactor inside, allowing it to hold five times more waste than a regular can. When the Streets Department realized its garbage collection methods were wasteful, the city called in Bigbelly.
