

What is the California Solar Canal initiative?

The California Solar Canal Initiative project aims to use information gained in a University of California, Merced study and begin to identify communities willing to generate electricity with solar arrays over their canals. The California Solar Canal Initiative (CSCI) aims to increase the number of solar installations on California's canals.

Will Fresno streamlined a solar and battery storage project?

What you need to know: Governor Newsom streamlined a solar and battery storage project in the Fresno area that would provide clean energy to power up to 300,000 homes. SACRAMENTO - Governor Gavin Newsom today announced he is taking action to streamline a clean energy project in Fresno that would power up to 300,000 homes.

Could solar panels save California's canals?

A 2021 study conducted by researchers from University of California, Merced, found that covering large sections of California's 4,000 miles of canals with arrays of solar panels could help conserve water, reduce air pollution, save land and generate clean energy using existing land and infrastructure.

Could California's new pilot project transform the water system?

WHAT YOU NEED TO KNOW: California is pioneering innovations to generate clean electricity while conserving water, and we're teaming up with the Biden Administration to advance another pilot project that could deliver a major new source of clean power and transform the state's water system.

What are solar over canal projects?

Solar over canals projects are installations of solar panels over water canals. This helps to reduce evaporation and generate clean electricity.

What is the main goal of California's new pilot project?

WHAT YOU NEED TO KNOW: California is pioneering innovations to generate clean electricity while conserving water, and we're teaming up with the Biden Administration to advance another pilot project that could deliver a major new source of clean power and transform the state's water system.

Included is a controversial clause that lets developers bypass local permitting and instead turn to the California Energy Commission for fast-track approval. ... Kings County District 1 Supervisor Joe Neves says his county ...

What you need to know: Governor Newsom streamlined a solar and battery storage project in the Fresno area that would provide clean energy to power up to 300,000 ...

Generate 13 gigawatts of clean power - more than half the projected new solar capacity needed by 2030 to

meet the state's decarbonization goals. ? MORE POWER: It's innovations like these that are pushing California's ...

SACRAMENTO -- Non-fossil-fuel sources now make up 61 percent of retail electricity sales in California thanks to historic investment that has led to an extraordinary pace of development in new clean energy generation, ...

From a national perspective, the land use needed to reach our clean energy goals is modest. But for states like California, with large populations, an ambitious and necessary clean energy timeline, and ongoing natural ...

The California Solar Canal Initiative project aims to use information gained in a University of California, Merced study and begin to identify communities willing to generate ...

In August, solar energy serving the grid reached a new peak of 19,600 MW. Governor Newsom has committed billions of dollars to accelerate clean energy infrastructure ...

On 14 days during March, Arizona utilities got a gift from California: free solar power.. Well, actually better than free. California produced so much solar power on those days ...

California is leading the nation toward a 100 percent clean energy future and addressing climate change for all. The Energy Commission plays a pivotal role by developing and mandating programs that use renewable energy, incentives ...

Los Angeles, Calif. - Clean Power Alliance (CPA), the nation's leading green power provider and California's largest community choice energy aggregator, continues to ...

California lawmakers are crafting a end-of-session package of proposed laws that could streamline the building of solar and offshore wind energy projects, according to people familiar with the discussions. Democratic ...

California's utilities regulator today adopted new rules for community solar projects, despite warnings from clean energy advocates that the move will actually undercut efforts to ...

Southern California Edison received approval from the State of California to proceed with power purchase agreements for three solar power projects and two geothermal projects from startup Fervo Energy.

- SAN FRANCISCO - The California Public Utilities Commission (CPUC) today expanded and improved its existing community solar programs and launched a new ...

In January 2007, California launched the Go Solar California campaign, a multi-entity \$3.3 billion ratepayer-funded effort to install 3,000 megawatts (MW) of new distributed ...

Energy storage projects capture power produced by wind and solar resources and discharge the energy back to the electric grid during times of peak demand. In California, electricity demand is highest in the late afternoon ...

Solar power and battery storage projects continue to grow strong around the world, in the US, and in California. A big project just commissioned in California adds to that ...

Mojave, California, is now home to one of the most ambitious solar and battery projects in the United States. In December 2024, Electrek reported that Arevon Energy 's ...

The Edwards Sanborn Solar and Energy Storage project is a massive renewable energy complex that covers 4,600 acres of land in California. It can generate 875 megawatts of solar power and store ...

The island state now has a 90% battery attachment rate on new solar projects, a goal battery companies would love to see repeated in California. Many California solar installers are already self-reporting 90% attachment ...
