

Do you owe taxes on solar in California?

The federal solar investment tax credit (ITC) is the most significant incentive for most homeowners going solar in California. Tax credits offset your tax liability, so it's only useful if you owe federal income taxes in the first place.

What are California's solar tax incentives?

The first solar tax incentive for Californians is the federal solar tax credit. This credit lets you deduct a portion of your solar energy investment from your taxes, making it easier for homeowners to go solar. Until last year, the solar tax credit was capped at a rate of 26% and was set to expire in 2024.

Does California have a solar tax credit?

There is no specific California solar tax credit, but the federal government offers a solar tax credit to all U.S. residents who own a home on which they install solar panels. The credit equals 30% of the cost to install solar, but can only be claimed by homeowners with the tax liability to claim the credit.

Are solar panels tax deductible in California?

Besides being a homeowner, you can also claim 26% of the total cost of your solar panel system as a tax credit. Use the California solar tax credit and federal rebates to make your solar panel purchase much more affordable.

How much does a solar installation cost in California?

The federal solar tax credit was extended by the Inflation Reduction Act in 2022 and will end after 2034. The average cost of a 6-kW solar installation in California is \$18,000 before incentives and \$12,600 after the federal tax credit.
