

What are solar-powered portable power stations?

Solar-powered portable power stations are a growing sector of the power market that keep your batteries full during power outages and off-grid campouts. These days, gas-powered generators aren't the only option for charging on the go.

What are the benefits of solar-powered portable power stations?

Solar-powered portable power stations keep your batteries full during power outages and off-grid campouts. These days, gas-powered generators aren't the only option for charging on the go. Solar-powered generators--also called portable power stations--are a growing sector of the power market.

Do solar panels need a power station to be useful?

Solar panels without a power station are not particularly useful. Therefore, the term 'solar generator' typically refers to both the panels and the station used together. One of the main differences in these models is how much charging 'juice' they can store, referenced in watt-hours.

How does a portable power station work?

A portable power station, also known as a solar generator, works by storing energy from the sun or other sources. Once juiced up, you can use it to charge battery-powered gadgets on the go, or keep lights or appliances running off-grid. Each unit holds a certain capacity for charging devices, measured in watt hours, or Wh.

How can you charge a power station?

To charge a power station, you can use a wall outlet, a vehicle's 12-volt port, or solar panels (often sold separately). Once the charging station is fully charged, you can use it to power battery-powered gadgets on the go or keep lights or appliances running off-grid with the bigger, higher-powered models.

What can a portable power station sustain?

Depending on output, many of these portable power stations can sustain household appliances the way a gas generator would. This often means battery-powered items, whether it's a smartphone, computer, rechargeable lights, or even a powered cooler or fridge.

Green Power Supply: The power station can be recharged by either the Jackery SolarSaga 60 Solar Panel or SolarSaga 100 Solar Panel. Its built-in MPPT controller further enables the solar panel to operate at its ...
