

Can you sell solar energy back to the power company

Should you sell solar power back to the grid?

But, most people with solar do not use everything they produce, so much of it is exported to the grid. By selling solar power back to the grid, you can further offset your energy costs, potentially leading to significant savings on your electricity bills. 2. Environmental Impact:

How do you sell back solar power?

Read on to learn about the different ways to sell back power. This is the most common way consumers believe they can sell electricity to the grid. However, the way that you can earn income from excess solar power is through net metering. Currently, there are over 35 states that offer a net metering program for solar system owners.

Can you make money with solar panels?

The idea that you can build a solar system that generates more energy than your home uses, then use that excess energy to make money by selling surplus power back to the utility company is a myth.

Is going solar worth it?

Overall, the reimbursement you would receive from the power company by generating excess energy is not worth the investment you would have to make in order to generate such extra power. However, the good news is that you will still save money by going solar--even if your solar system produces less solar than your home uses!

What happens if you sell energy back to the grid?

Higher electricity rates mean that each kilowatt-hour (kWh) of excess energy you sell back to the grid is worth more, increasing your potential earnings. Net metering policies: Net metering policies vary by state and utility company and can impact how much you earn from selling energy back to the grid.

What are the benefits of selling solar energy?

One immediate benefit of selling solar energy is earning credits on your utility bill, significantly reducing overall energy costs. Utilizing solar incentives and net metering programs allows homeowners to convert solar energy production into financial savings. Credits are based on excess electricity generated, measured in kilowatt-hours.
