

Why is a cap battery more powerful than a large battery?

Because of the way cap recharge works, a cap battery of a particular size is more powerful for cap regen on smaller capacitor than it is a large one. Do a quick Google on how capacitor (and shield) recharge works in eve. Edit- nvm beat me to it. What is total capacitor recharge time derived from?

Should a cap module be used in Ewar fights?

Ideally you use a mix of modules to provide a better recharge and battery increase just enough to help maintain CAP when needed. But a large CAP with no improvements to recharge is useless in EWAR fights as it'll run out of CAP and never gain it back until the fight is over.

Does a ship have a 0 cap energy?

(IRL that means that usable energy is only a by-product of pollution.) You can not generate an infinite amount of work, without having an infinite amount of heat. Now, we know that a ship contains another source of energy that allows it to keep working even at 0 cap energy.

Are Sleipnir and Vagabond cap stable?

What I discovered is that despite having a larger, more powerful capacitor, the Sleipnir was not cap stable, while the smaller Vagabond was cap stable.

SN is more difficult to be oxidized or reduced due to the LAGP/SN interaction. The NCM523/Li batteries provide excellent rate capability and cycling performance. The ...

Shanghai Yongming electronic company established in 2001, is a leading manufacturer in providing and selling diversified aluminum electrolytic capacitors.

T2 small cap battery doesn't cost much nor take much skill and it gives 84 cap, this almost doubles the cap on some frigs. An Atron fitted with one can clear about 150 AU which ...
