

What is a Level 1 EV charger?

A Level 1 charger is a charging unit that connects your electric vehicle to the power grid via a standard 120-volt AC outlet (wallplug). This type of charger uses a dedicated circuit and is compatible with most electric vehicles. AC is the standard form of electricity utilized by most household appliances, including Level 1 EV chargers.

What is a Level 2 charging station?

Level 2 charging stations use 240V electric outlets, which means they can charge an EV much faster than Level 1 chargers due to higher energy output. An EV driver can connect to a Level 2 charger with the attached nozzle cord using the integrated J plug built into most EVs.

What are the different types of EV charging stations?

There are three levels of EV charging stations: Level 1, Level 2, and Level 3. Level 1 is the slowest, while Level 3 can charge an EV's battery most of the way in about an hour. Before we dive in, we should review some terms.

What is a Level 1 charging station?

Level 1 charging may also work well for plug-in hybrid vehicles, which tend to have smaller batteries and charge more quickly. The main draw of Level 1 charging stations is affordability and ease: A homeowner can simply park their EV in a garage and plug it into an existing outlet.

What is a Level 1 charging device?

A Level 1 charging device is a charger that plugs into a typical household 120V outlet. Automakers often include this type of charging equipment with new electric cars. It is convenient due to the ubiquity of these outlets, but it replenishes your car's battery pack at a very slow rate.

How long does a Level 1 Charger take to charge?

However, it may take up to 24 hours to fully charge a battery, which makes Level 1 charging impractical for drivers that log a lot of miles on a daily basis. For an in-depth look at Level 1 charging stations, read [What is a Level 1 charger for electric vehicles?](#) next.
