

Does CATL have a qilin battery?

CATL has launched its third-generation CTP (cell to pack) technology, which it internally calls the Qilin battery, through continuous technology iteration, said Wu Kai, chief scientist at the power battery giant.

What is Qilin battery?

On March 26, at the 2022 China EV Council 100 Forum, CATL's Chief Scientist Wu Kai said that CATL announced the launch of its third generation of CTP (cell to pack) technology, internally known as Qilin battery (formerly known as Kirin).

What is CATL's Kirin battery?

CATL is a promoter of LFP batteries, which are said to offer lower energy density than other chemistries. Nevertheless, the Kirin battery is not limited to using this chemistry exclusively. That's exactly why CATL's chairman references a large cylindrical battery "with the same electrochemical system."

What is Kirin battery?

Kirin battery is the third-generation CTP battery pack of CATL. Recently, the latest Kirin battery has been released, and the performance of the battery pack was upgraded greatly. The latest Kirin battery does not place the water-cooling plate on the bottom but inserts it among the cells, which greatly enhances the water-cooling effect.

When will CATL unveil the Kirin battery?

This is acknowledged by Robin Zeng, founder and chairman of the power battery giant, even as he confirmed CATL will officially unveil the Kirin battery next quarter. This is the formal step before entering volume production.

How much energy does a Kirin CTP provide?

That's exactly why CATL's chairman references a large cylindrical battery "with the same electrochemical system." The Kirin CTP could provide 160 Wh/kg or 290 Wh/l when using LFP cells. But when switching to the NMC chemistry, that number reaches 250 Wh/kg or 450 Wh/l. This is the energy density of the battery pack, not of the individual cells.
