

Chinese battery giant Contemporary Amperex Technology (Catl) says it has developed a battery that can power an electric vehicle for more than one million miles, over a period of 16 years.

CATL isn't alone in talking about million-mile battery tech. GM is working on the same issue with its new Ultium platform, which will underpin vehicles like the upcoming GMC Hummer EV and the ...

CATL's million-mile battery boasts zero degradation after 1,000 cycles, challenging conventional notions of battery lifespan. This remarkable feat opens up new possibilities for ...

The battery has a service life of up to 15 years or 1.5 million kilometers and a warranty of 10 years or 1 million kilometers, CATL said. The CATL Tectrans Bus Edition has an energy density of 175 Wh/kg, the highest ...

China's CATL, the company often floated alongside Tesla's million-mile battery rumor, says its battery will go 1.24 million miles.

At IAA Transportation 2024, Contemporary Amperex Technology Co., Limited (CATL), the global leader in new energy technology innovations, launched its ...

Zeng Yuqun, chairman of Contemporary Amperex Technology Co Ltd (CATL), has said the Ningde-based manufacturing firm has the capability of making a battery pack that can ...

CATL and Tesla both announced recently that they were working on a battery that could achieve 1 million miles and boasts chemistry that reduces the need for precious ...

The battery chemistry of the EV will be the key determinant of the number of battery cycles that a given EV model is capable of. LFP batteries will often be capable of two to three times the number of cycles compared to NMC ...

Yuqun says that the chemistry of CATL's new M3P cells means an expected improvement in energy density of around 15 percent over CATL's current lithium iron phosphate (LFP) battery packs...

This next level was announced in 2020 when Zeng announced CATL would produce a "million-mile battery" jointly with Tesla. The Million Mile Battery. CATL's LFP battery has a density of 200Wh/kg, up from 161 Wh/kg in ...

It is also not clear which cell chemistry CATL will use in the batteries for Yutong. The bus manufacturer will

continue to rely on batteries from the Chinese market leader for some time. In 2022, Yutong and CATL extended ...

CATL, an industry-leading battery manufacturer has announced that it is ready to mass-produce car batteries that can last up to 16 years and one million miles. The company's link with Elon Musk's Tesla hints that the latter ...

Samsung is developing a battery with a solid-state electrolyte that enables a 600-mile range, and CATL is releasing a bus battery with a one million-mile lifespan. Battery technology is crucial in facilitating electric vehicle ...

The Tectrans T Long Life Edition leads the industry with a projected lifespan of up to 15 years and over 1.7 million miles (2.8 million kilometers). The battery is available in various capacities ...

According to a 2019 tweet from Elon Musk, the 2170 battery cells (NCA chemistry) found in the existing Model 3s made at Fremont are expected to last around 1,500 cycles which translates out to somewhere between 300K to ...

Bloomberg talked to its chairman, Zeng Yuqun, and he said CATL was ready to sell a 16-year, 2-million-km (1.24-million-mi) battery to any carmaker willing to make an order. Learn more ...

Reuters reported that a new no-cobalt lithium iron phosphate (LFP) battery chemistry resulting from CATL research and development could bring ...

Last summer, we told our readers about a new battery chemistry from CATL, the world's largest maker of lithium-ion batteries. Called M3P, the new batteries are said to be up to 15% more energy ...

Recently, CATL achieved the powerful milestone of a 1 million mile battery, a battery that will last for 1 million miles before it can no longer be recharged, a technical feat which has drawn eyes globally () ().CATL has ...
