

What is CATL Qilin CTP 3.0?

The CATL Qilin CTP 3.0 is their second generation cell to pack design. Qilin is named after a legendary creature from China. The latest CATL post suggests that this integrated system can increase the energy density to 255Wh/kg for ternary battery systems (NMC,NMCX etc),and 160Wh/kg for LFP battery systems.

What is CATL Qilin battery?

Together with overall breakthroughs in the core process,algorithm,and materials,CATL redefines battery structure design with "Qilin," which is named after a legendary creature in Chinese mythology. In the CTP 3.0 battery,the internal crossbeam,liquid-cooling plate,and thermal pad have been integrated into a multifunctional elastic interlayer.

How much energy does a qilin battery use?

Qilin is named after a legendary creature from China. The latest CATL post suggests that this integrated system can increase the energy density to 255Wh/kgfor ternary battery systems (NMC,NMCX etc),and 160Wh/kg for LFP battery systems. Essentially removing the overheads of a module.

What is the difference between NMC qilin and LFP battery?

The energy density of a NMC Qilin battery reaches 255Wh/kg,while that of an LFP battery amounts to 160Wh/kg. NMC Qilin battery uses Cell to chassis (CTC) technology,which integrates the battery cell with the vehicle body,chassis,electric drive,thermal management,as well as various high and low voltage control modules. This extension results in a driving range of over 1,000 km.

What is CATL Qilin?

Today,CATL launched Qilin,the third generation of its CTP (cell-to-pack) technology. With a record-breaking volume utilization efficiency of 72% and an energy density of up to 255 Wh/kg,it achieves the highest integration level worldwide so far,capable of delivering a range of over 1,000 km in a breeze.

How many miles can a qilin battery deliver?

According to recent reports out of China,the world's leading battery manufacturer CATL has successfully achieved mass production of its energy dense Qilin batteries capable of delivering 1,000 km (621 miles)of range. CATL's new cells utilize the 4680 pack structure and will debut on the upcoming ZEEKR 009 multi-purpose vehicle (MPV).

This is because the BYD Blade battery uses iron-based cells, which have a higher decomposition and lower heat release temperature than the nickel-based cells used in Tesla's 4680 cells and CATL ...

Showcased during this year's Beijing Auto Show, CATL's new LFP battery system is capable of providing up to 370 miles of driving range after a 10-minute top-up, while the total driving range ...

The battery, called Shenxing Plus, is said to be the first LFP battery that enables a range of 1,000 km (621 miles) and can also be charged very quickly (at 4C), writes CATL. However, the 1,000 km ...

CATL: batterie condensate, Qilin e ioni di sodio. CATL ha impresso una straordinaria accelerazione alla sua tecnologia, presentando nuove soluzioni ogni anno. ... BYD sembra essere stata colta in contropiedi ...

The launch Xiaomi SU7 max battery is made by CATL and appears to be the Qilin approach with Xiaomi integrating this as a Cell to Body design. ... The sides of the battery cells feature 165 pieces of aerogel insulation material, ...

Last August, CATL presented the Shenxing battery, an LFP pack capable of adding 400 km of range in 10 minutes. This year, the company has rolled the tech into the Shenxing Plus, which combines ...

The Qilin can increase the energy density to 255 Wh/kg for ternary battery systems, and to 160 Wh/kg for LFP systems. With the same chemical system and pack size, it can deliver 13% more power than a 4680 battery. The batteries ...

According to recent reports out of China, the world's leading battery manufacturer CATL has successfully achieved mass production of its energy dense Qilin batteries capable of delivering...

The Zeekr 001 with a 140-kilowatt-hour (kWh) CATL Qilin battery has a CLTC range of 641 miles (1,032 km). That's a very high result, although we must note that the CLTC test cycle used in China is ...

CATL?2022623????3???????CTP(Cell To Package)3.0?????NMC??????(Qilin)?????

CATL claims to have also achieved the world's first large-scale industrialization of lithium-iron-phosphate (LFP) battery recycling, with a current capacity to process 270,000 tons ...

PushEVs points out that if Tesla would use the CATL's new batteries in the Made-in-China (MIC) Model 3/Model Y entry-level versions (instead of its current CATL's LFP cells and own battery ...

On August 16, 2023, CATL unveiled the Shenxing Superfast Charging Battery, which it said was the world's first LFP battery to support 4C charging. C refers to the charging multiplier of the battery, and 4C means that ...

The Qilin Battery can achieve energy densities of 255Wh/kg with ternary cells and 160Wh/kg with LFP cells, CATL previously said. CATL's innovation was named the best invention of 2022 by Time magazine in the ...

The Qilin battery (English "Kirin"), announced in March 2022 and unveiled in June, is essentially the third generation of CATL's cell-to-pack (CTP) battery system, based on prismatic lithium-ion ...

Der chinesische Batteriehersteller CATL hat laut chinesischen Medien mit der Massenproduktion seiner Qilin-Batterie begonnen. Dabei handelt es sich um die im Juni 2022 vorgestellte dritte Generation der. ... Die ...

The Zeekr 140kWh CATL Qilin battery pack is interesting as it is an NMC chemistry in a cell to pack design. ... vehicles Energy density fast charge fast charging fuses gravimetric density hev High Voltage Bus HV circuit ...

The true potential of the CATL Qilin battery system will be unleashed by the new version of the Zeekr 001 model, which is promised to offer 622 miles (1,000 km) of range, as the first series ...

The Qilin Battery is CATL's innovation in battery pack construction, not battery chemistry. This means that this pack structure can be used for ternary batteries as well as ...

CATL's Qilin Battery enhances EV range through its innovative cell-to-pack (CTP) 3.0 architecture, achieving a record 72% volumetric efficiency and 255 Wh/kg energy density. ...
