

How much do solar panels cost?

Finding the lowest possible price tag for your solar panel installation might sound like the best way to save money when you go solar, but the payback period of your solar panel system might take twice as long, and your panels may never earn the return you expected. In 2024, the average cost of solar panels is around \$2.86/W before incentives.

Where can I buy cheap solar panels?

If you're looking to buy cheap solar panels, we recommend looking at options from Q Cells and LONGi, in particular. These are both tier-one panel manufacturers that offer low prices, solid warranty coverage and above-average efficiency ratings for their products.

Is a cheap solar panel worth it?

A cheap solar panel isn't worth anything if it breaks without a warranty to replace it. The cost of a solar panel is set by the manufacturer and involves a variety of factors, from cost of production to expected lifetime. Let's break down the factors that go into solar panel costs.

How much does a home solar system cost?

As of 2025, the average cost of home solar installations is between \$18,000 and \$23,000. Cutting corners can save you money, but you don't want to sacrifice quality when it comes to an investment like solar. We've compiled a list of reliable, low-cost solar panels that produce great results to provide the best of both worlds.

How do I get the best price for a solar installation?

As with anything else, the key to getting the best price is knowing the market. Corey Ramsden, vice president for Go Solar programs at Solar United Neighbors, recommends that consumers get at least three proposals when shopping for a residential solar installation.

What are the cheapest solar panels per watt?

At just \$2.36 per watt, AXITEC offers the cheapest solar panels per watt on our list. The German manufacturer offers average warranties and isn't a top performer in terms of performance or resiliency, but AXITEC panels can be a great way to go solar on a budget.
