

In 2023, China's new renewable energy capacity reached 297.6 gigawatts, accounting for 63% of global expansion. The country accounts for 45.5% of global ...

According to the national energy administration (NEA), China added 217 gigawatts (GW) of solar capacity in 2023, a figure which surpasses its previous record of 87GW in 2022 ...

China is on track to double its utility-scale solar and wind power capacity and shatter the central government's ambitious 2030 target of 1,200 gigawatts (GW) five years ahead of schedule, if all prospective projects are successfully built ...

China's NEA has revealed that China's cumulative PV capacity has reached 609.49 at the end of 2023. The nation added 216.88 GW of new PV capacity in 2023, up 148.12% ...

China's cumulative installed solar capacity hit 886.66 GW at the end of 2024, with 277.17 GW of new annual installations, up 45.48% year on year. The deployment surge exceeded forecasts, setting a ...

Record Growth in PV Installations: In 2023, China installed 216.3 GW of new PV capacity, a remarkable 147.5% year-on-year increase, bringing its total cumulative capacity to 609 GW. ...

The rapid growth of China's solar sector from 2023 to 2024 has strained critical resources, including financial capital, grid capacity, and government support.

China's National Energy Administration (NEA) has released its power industry statistics for 2023, which show that solar power capacity soared by 55% to surpass 609 GW, ...

The China Solar PV Industry Association (CPIA) has once again adjusted its 2023 solar PV installation projections, now anticipating a new capacity ranging from 345 GW AC to ...

China's installed capacity of renewable energy exceeded 1.45 billion kilowatts in 2023, accounting for more than 50 percent of the country's total installed power generation ...

A new report by Wood Mackenzie reveals that China will control over 80 percent of the world's production of polysilicon, wafers, cells, and modules - the critical components of ...

China broke its own records for new wind and solar power installations again last year, official data showed on Tuesday, accelerating from a breakneck pace set in 2023 as the country looks to peak ...

SolarPACES announces the publication of the 2023 edition of Blue Book of China's Concentrating Solar Power industry, by China Solar Thermal Alliance. It offers an ...

China can now make more solar power than the rest of the world. Data released by China's National Agency last week revealed that the country's solar electric power generation ...

A new report by Wood Mackenzie reveals that China will control over 80 percent of the world's production of polysilicon, wafers, cells, and modules - the critical components of solar panels -...

China's NEA has revealed that China's cumulative PV capacity has reached 609.49 at the end of 2023. The nation added 216.88 GW of new PV capacity in 2023, up 148.12% increase from 2022.

On Jan. 21, China's National Energy Administration (NEA) revealed the nation had added a record 277 GW of solar in 2024. This was up 28% on 2023's 216 GW, bolstering ...

The China Solar Energy Market is projected to register a CAGR of greater than 15% during the forecast period (2025-2030) Reports In January 2023, JA Solar signed an agreement with China's municipal government in Erdos to ...

China's solar power generation reached nearly approximately 584 terawatt hours in 2023. Compared to the previous year, solar power capacity in China increased by 55 percent ...

The nation put up 357 gigawatts of solar and wind, a 45% and 18% increase, respectively, over what was operating at the end of 2023, according to China's National Energy Administration. That's akin to building 357 full-size ...
