

Are solar panels a good investment in Connecticut?

Solar panel systems in Connecticut are expensive, but incentives from the state and federal government can help you reduce the upfront cost. Between the federal tax credit and other state-specific incentives, you can save thousands on solar panels, making them well worth the investment.

How much do solar panels cost in Connecticut?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Connecticut homeowner needs a 10.99 kW solar panel system to cover their electricity needs, which comes out to \$32,628 before incentives. Prices range from \$27,734 to \$37,522, but after the federal tax credit, that drops by 30%.

Are solar tax credits available in Connecticut?

Connecticut is one of the top ten states for solar policy and incentives and has consistently ranked high in solar installations per year for the past few years. There are solar tax credits and incentives available at the state level in Connecticut. The calculator above will show you the value of all incentives your home is eligible for.

Does Connecticut offer solar incentives?

In addition to solar incentives, Connecticut also offers a great battery incentive program to bring down the price of energy storage.

Should you go solar in Connecticut?

But with affordable state financing options and some of the highest electricity rates, it's still a great place to install solar panels. In fact, as long as you have the right roof, solar makes sense for most Connecticut homeowners. Here's what you need to know about going solar in the Constitution State.

Does Connecticut promote solar ownership?

Connecticut does not promote solar ownership through incentives or tax credits as some other states do. Instead, it engages in a public/private partnership to install solar systems under a third-party ownership model called a power purchase agreement (PPA).
