What affects solar energy production?

Solar energy production is affected by the sun's intensity varying with location, the time of year, and the time of day. Additionally, how much energy solar panels produce is generally weather dependent, making solar energy an intermittent energy source.

When can solar panels not produce energy?

Solar panels can't produce energy at night. Since solar energy depends on sunlight, it can only produce energy in the daytime. This makes solar energy far from being reliable compared to other energy sources like nuclear, fossil fuels, natural gas, etc.

Why are solar energy systems less efficient?

Solar power systems are less efficient in areas with limited sunlight or long winters. In addition, it makes solar energy a less viable renewable energy source for specific regions. Solar energy storage ensures a consistent electricity supply, especially during nighttime and cloudy days.
