

What is a cubic yard box?

The cubic yard box is the most economical way to ship and store solid hazardous or non-hazardous materials. Cubic yard boxes are made to store the equivalent of four 55-gallon drums. Container Distributors Inc. makes the boxes affordable to ship and easy to construct on site, so you can order any number that you need for any job.

How much waste can a 10 yard container hold?

A 10-yard container typically holds 10 cubic yards of waste. The container's length, width and height are measured from the outside, giving a slightly higher than actual cubic yard capacity. Therefore, it is advisable to reduce 6 to 8 inches from the actual dimensions to ascertain the exact carrying capacity of the container.

What is the difference between a clean-Pak and a cubic yard box?

The 6-mil high-density polyethylene inner liner included also meets all CFR-49 requirements. Clean-Pak flat top hazardous waste disposal containers are similar to the cubic yard box, but include more moisture resistance and extra durability.

How do I choose the right container for my hazardous waste?

So whether your hazardous waste is in liquid, gaseous, or solid form, always use the right container for the type of waste generated. A variety of container sizes are available for transportation of hazardous waste based on thickness of a drum, materials used, and closing or latching mechanisms. A few options include but are not limited to:

What are the different types of hazardous waste container sizes?

A variety of container sizes are available for transportation of hazardous waste based on thickness of a drum, materials used, and closing or latching mechanisms. A few options include but are not limited to: Cubic yard boxes (ideal for those generators who fill up drums too quickly)

How big should a waste container be?

Ideally, the size of the container should only be slightly bigger than the quantity of waste. It is not advisable to place incompatible waste in a single container and a supervisor must first approve the mixing of any materials. The type of waste must be compatible with the container's material itself to prevent corrosion and leakage.
