

Do electric vehicles need charging stations?

Consumers and fleets considering electric vehicles (EVs)--which include all-electric vehicles and plug-in hybrid electric vehicles (PHEVs)--need access to charging stations. For most drivers, this starts with charging at home or at fleet facilities.

How many EV charging stations are there?

Tens of thousands of electric vehicle (EV) charging stations are available in the United States. These charging stations are being installed in key areas throughout the country for public charging and workplace charging as a supplement to residential charging. Most EV owners do the majority of their charging at home.

What EV charging infrastructure is used in the alternative fuels data center?

The Alternative Fuels Data Center and the Station Locator use the following charging infrastructure definitions: Station Location: A station location represents a physical place with one or more EV charging ports. Examples include a parking garage or a parking lot.

How do I search for charging stations?

Use the Advanced Filters to search for private and planned stations, as well as charging stations to match certain search criteria. Consumers and fleets considering electric vehicles (EVs)--which include all-electric vehicles and plug-in hybrid electric vehicles (PHEVs)--need access to charging stations.

How has EV charging infrastructure changed since 2011?

This chart shows the growth of U.S. public and private electric vehicle (EV) charging infrastructure since 2011. The number of electric vehicle (EV) charging ports has grown consistently, and the number of EV charging station locations has also increased steadily. Between 2015 and 2020, the number of EV charging ports more than doubled.

How do I find EV charging stations?

Charging the growing number of EVs in use requires a robust network of stations for both consumers and fleets. The Alternative Fueling Station Locator allows users to search for public and private charging stations.

National Renewable Energy Laboratory estimates that by 2030 there will be 33 million EVs on the road and 28 million EV charging ports will be needed to support them. ... Estimates show 182,000 (~1%) DC Fast charging ...
