

Are solo cups BPA-free?

The Product Safety Director for Consumer Reports, Don Huber, remarked that the heat from dishwashers could discharge BPA and Phthalates from plastic products washed in them. But as far as red Solo cups are concerned, you'll be pleased to hear they don't contain BPA. Meaning, solo cups are BPA-free.

Are Red Solo cups toxic when heated?

Red solo cups are made of thick molded thermoplastic polystyrene, which is toxic and should not be microwaved. Heating these cups can cause the release of BPA, a chemical that can leach into your drink and potentially cause health issues, including affecting the endocrine system. (Note: The original passage incorrectly stated that the cups themselves are toxic, but the issue is actually with the chemicals released when heated.)

Can you microwave a red Solo Cup?

You should not microwave a red Solo Cup. It's made of plastics that produce BPA and phthalates when heated. Heating these industrial chemicals can lead to health issues as they leach into your drink. Our write-up today explains why microwaving a red Solo Cup isn't recommended. Related post: Can You Microwave a Solo Cup?

Can you put solo red cups in the dishwasher?

Solo red cups can be safely washed in a dishwasher, providing you position them in the top rack. If you've got a lot of leftover plastic cups to wash, it can seem like an arduous chore. The problem is that not everything can go in a dishwasher unless there's an evident sign of "dishwasher safe."

Are solo cups dishwasher safe?

But as far as red Solo cups are concerned, you'll be pleased to hear they don't contain BPA. Meaning, solo cups are BPA-free. If you have bought any plastic products which claim to be dishwasher safe, it is best to place them in the top rack of your dishwasher to keep them as far away as possible from the machine's heating element.
