Photo of electric charging station "powered by diesel generator" is emblematic of the electric vehicle movement. Tesla charging stations in Robbinsdale, Minn. (AP Photo/Abbie Parr)

Will a diesel fuel generator work for EV drivers in remote areas?

A 2018 photo of an electric vehicle charging station powered by a diesel fuel generator was part of a test by an Australian to see whether it would work for EV drivers in remote areas without a network of charging stations. Most EV drivers in the U.S. recharge their vehicles at home or at a growing network of charging stations across the country.

Does EV charging rely on diesel or gas generators?

The EV charging network doesn't rely on diesel or gas generators at all. Electric vehicles have soared in popularity in recent years, offering drivers a way to get around that doesn't depend on gasoline. But some posts on social media claim those drivers are still burning fuel by using diesel generators to charge their cars.

Is a 350 kilowatt EV charging station 'popping up everywhere'?

One photo shared across social media claims to show an EV hooked up to a charger running on a "350 kilowatt generator [using] 12 gallons of diesel fuel per hour." It says this kind of charging station is "popping up everywhere." VERIFY reader Jon asked us if there was any truth to these claims.

Can You charge an EV with a portable generator?

It describes it as "a portable fast charging station for temporary sites and remote areas." It's also possible to charge your EV with a smaller gas-powered portable generator, but those may not be compatible with every vehicle, according to EV Connect, a company that makes EV charging management software.
