

What are electric vehicle charging stations & battery-swapping stations?

Electric vehicle charging stations and battery-swapping stations is a new type of energy supplement facility, similar to gasoline station, but different from gasoline station.

Which factors should be considered in the study of electric vehicle charging stations?

In addition, characteristic factors such as the price of facilities and the types of user needs are also important factors that need to be considered in the study of the location of electric vehicle charging stations and battery-swapping stations. Currently, there are two main charging modes on the market: DC charging and AC charging.

What are the different charging modes for electric vehicles?

Currently, there are two main charging modes on the market: DC charging and AC charging. In the DC charging mode, the electric vehicle can quickly replenish most of the electric energy in a short time, but it will cause certain damage to the service life of the battery.

What is the impact of location and layout of charging stations?

The impact of the location and layout of charging stations and battery-swapping stations is to minimize the total cost, maximize user satisfaction, and minimize the electric energy consumed by electric vehicles on the way to stations.

How to plan the location of charging stations and battery-swapping stations?

The location planning of charging stations and battery-swapping stations needs to meet the needs of users. Therefore, this section starts from the orientation of user satisfaction, and establishes a user satisfaction model with the maximum satisfaction of fast-charging users, slow-charging users, and battery swap users as the objective function.

Do charging stations have a service radius?

Existing research shows that the charging stations and battery-swapping stations themselves also have service radius, and the general service radius will have a great influence on the user's choice.
