What is a home EV charger?

Many of the home EV chargers on this list are smart chargersthat connect to your home and the internet via Wi-Fi. This data connection allows you to adjust and control the charger, schedule charging times to accommodate off-peak energy rates and monitor how much energy is used during charging and how much it's costing.

How do home EV chargers work?

Home EV chargers can be divided two ways: By their charging speed and their connector types. Charging speed is split into Levels 1 and 2. Level 2 chargers are generally between six and 10 times faster than Level 1, but require 240-volt power rather than the more common 120-volt socket.

How much does it cost to charge an EV?

Some wallboxes also come with the option of a longer cable, which adds to the cost. For most, 7kW chargers are a good choice and cost around £800 to buy and install. Charging at home is the cheapest way to power an EV. Find out how much it costs to charge an electric car What power of EV charger should I buy?

Do you need an EV charger at home?

If you have a significant commute that you expect to power at home, your best option is likely to invest in an L2 charger. An L2 charger offers the speed and convenience most homeowners are looking for. However, if your employer provides EV charging as a benefit and you only need a charger at home as a backup, you may rarely charge at home at all.

What level EV charger should I buy?

This buying guide will provide more thorough guidance, but the best answer for the broadest number of people is a plug-in Level 2charger with a peak charge rate around 40 amps. Are all EV home chargers the same? Home EV chargers can be divided two ways: By their charging speed and their connector types. Charging speed is split into Levels 1 and 2.
