

Does the eve door & window run on a battery?

The battery-powered Eve Door & Window acts as a Thread endpoint (as does the Eve Aqua, which also runs on a battery), while the plugged-in Eve Energy and Nanoleaf's Thread-enabled lights are Thread routers, which can extend Thread networks by connecting multiple Thread devices together.

How to power Eve door & window sensor?

To power the EVE Door & window sensor, it requires a single AA battery. It has a power supply input voltage of 3.6 V, ensuring efficient and reliable operation. The transmitter, which is responsible for sending the status information, has a width and depth of 18 mm, contributing to its compact design.

What is Eve door & window?

Eve Door & Window is a Minimal Thread Device (MTD) - but what does that mean? The current version of Eve Door & Window supports Thread. This technology makes your smart home network more responsive, robust, and increases its reach - the only thing you need is a home hub (Thread border router).

Does Eve door & window support thread?

The current version of Eve Door & Window supports Thread. This technology makes your smart home network more responsive, robust, and increases its reach - the only thing you need is a home hub (Thread border router). Battery-operated Thread accessories, such as Eve Eve Door & Window represent endpoints in your Thread network.

What are the product specifications of the eve door & window?

Below you will find the product specifications and the manual specifications of the EVE Door & window. The EVE Door & window sensor is a wireless device specifically designed for monitoring the status of doors and windows. With a compact size, it has a depth of 24 mm and a height of 23 mm, making it suitable for various door and window frames.

Does Eve door & window have a magnet?

Yes, it is. All you need to do is stick the tiny magnet and miniscule 5-cm-/2"-wide sensor to any flat surface. It doesn't even matter if your door's recessed behind the frame, as Eve Door & Window includes super-useful spacers so you can line up the top of the magnet with the sensor for optimal performance.
