

How to power Eve door & window sensor?

To power the EVE Door & window sensor, it requires a single AA battery. It has a power supply input voltage of 3.6 V, ensuring efficient and reliable operation. The transmitter, which is responsible for sending the status information, has a width and depth of 18 mm, contributing to its compact design.

How much battery does the eve door & window take?

Thread is also touted as being incredibly power efficient which is ideal in wireless sensors but Eve doesn't provide estimated battery life figures for the Door and Window. Speaking of the battery, the Eve Door and Window is powered by a single 1/2 AA (ER14250) 3.6-volt cell.

How long does the eve door & window sensor module last?

The Eve Door & Window sensor module is powered by a half-AA (ER14250 3.6V) battery, which is included in the box. The battery that came with our review unit ended up lasting about 11 months; that's a tad shy of Eve's estimate of a year, but it's close enough.

What are the product specifications of the eve door & window?

Below you will find the product specifications and the manual specifications of the EVE Door & window. The EVE Door & window sensor is a wireless device specifically designed for monitoring the status of doors and windows. With a compact size, it has a depth of 24 mm and a height of 23 mm, making it suitable for various door and window frames.

What temperature is Eve door sensor rated for?

For starters, Eve's sensor is rated for indoor use only, with operating temperatures ranging from 32-104 degrees Fahrenheit. As with other Eve products, the company's door and window sensor incorporates both Bluetooth Low Energy and Thread mesh networking technology for its wireless connection to Matter.

Why is my Eve door & window sensor not working?

The EVE Door & Window sensor may have reduced performance or may not work properly on metal doors/windows due to interference. If this is the case, consider using a different type of sensor specifically designed for metal surfaces. How far can the EVE Door & Window sensor be placed from the hub or receiver?
